Agustín Nicolás López

Junior Full Stack Developer · Angular · TypeScript · Supabase

Buenos Aires, Argentina · agus.lopez042004@gmail.com · +54 11 2375-6940 · github.com/Agusslo · linkedin.com/in/aguslopezz

PROFILE

Advanced student in the Programming Systems technical degree at UTN (National Technological University). I build complete web applications with **Angular, TypeScript and Supabase**, from the data model to deployment. I have my own app in production with authentication, roles, real-time updates and PWA support, plus 4+ years leading teams and solving problems in customer-facing roles. I'm looking for my first developer position where I can keep learning as part of a team.

PROJECTS

Hollownest Cinema — Movie theater ticketing system

hollownestcinema.vercel.app

Angular · TypeScript · Supabase (PostgreSQL) · PWA · Vercel

- Full web app built from a client's evolving requirements: movie listings, seat booking, concession stand, coupons, combos, loyalty points and order cancellation with account credit.
- Relational data model in PostgreSQL with **Row Level Security**, email and Google sign-in, and **role-based** route protection (customer, employee, admin) using guards.
- **Real-time** seat availability with Supabase Realtime, no page reload needed.
- PDF tickets with **QR codes** and a staff screen to validate them by scanning with the camera.
- Admin dashboard with revenue reports, sales charts and an activity log.
- Modern Angular: standalone components, signals, reactive forms, control flow, custom pipe and directive. Installable as a **PWA** with a service worker.

OverCooked 2026 — Restaurant management mobile app

Final project · in progress

Ionic · Capacitor · TypeScript · Supabase · Git (branching workflow)

- Cross-platform mobile app for restaurant operations, with a Supabase backend.
- Branch-based workflow (*develop / features*) and a domain-driven folder structure (*core + features*) that I later reused in other projects.

Piece Tech — Business landing page

- Responsive site built without frameworks (HTML, CSS, JavaScript) with scroll animations, a 3D tilt effect and direct WhatsApp contact.

GameSense — E-commerce website

- Online store with shopping cart, authentication, form validation and a MySQL database.

TECHNICAL SKILLS

Frontend	Angular, TypeScript, JavaScript, HTML5, CSS3, Sass, React, Ionic, PWA
Backend & data	Supabase, PostgreSQL, MySQL, MongoDB, SQL, Node.js, Express.js, REST APIs
Tools	Git, GitHub, Vercel, Capacitor, VS Code, Linux
Other languages	Python, C, C#, Java, Lua
Languages	Spanish (native) · English (intermediate)

WORK EXPERIENCE

Store Manager — Kiosco Baires10

2024 – Present

- Coordinate staff, cash handling, inventory and supplier orders; solve day-to-day operational issues.

Community Manager — Freelance

2024 – 2025

- Managed social media for several accounts: content creation, editorial calendars and metrics analysis to improve results.

Store Manager — Helados & Café Pirulo

2021 – 2024

- Trained and coordinated the customer service team; managed purchasing, inventory and daily cash closing.

EDUCATION

Technical Degree in Programming Systems — UTN Avellaneda

2022 – Present

Advanced student, final project in progress.

English as a Foreign Language, Level 6 — Language Laboratory, University of Buenos Aires

2026

High School Diploma in Economics and Business — Instituto María Auxiliadora

2016 – 2021
